

What's SMART?

One of the most important aspects of any business is keeping your operation running.

- So, what is the cost to your business when a machine breaks down?
- Is there a replacement part in stock?
- Is it easily located and accessible?
- Is the part usage tracked to ensure future availability?
- Is a new replacement part ordered at the appropriate time?
- Can you easily identify your excess inventory?

There is a better solution to keep your operation running smoothly. It's called the SMART System. And it can reliably track all of your inventory information in realtime without having to dedicate a person to a job that requires such significant and precise data collection.

This ensures that you have the right part in the right quantity at the right time.

Erie Bearings Co. is the electro-mechanical solutions provider. We have an enormous inventory, the most knowledgeable employees in the industry, and flexible, responsive service that is second to none.

Anyone can supply the part we supply solutions.

For more information about Erie Bearings Co. or the SMART System, call us or visit us online at www.eriebearings.com.

SMART System

Storeroom
Management
And
Replenishment
Tool

The Electro-Mechanical Solutions Provider

Think SMART

In a recent survey of manufacturers, 98 percent reported having experienced lost production or extended downtime due to storeroom stock-outs. 82 percent believe that their existing storeroom management procedures could be improved to prevent future downtime.

Our Storeroom Management And Replenishment Tool (SMART) System is the answer.

The SMART System uses barcode technology to track your inventory and produces detailed reports with the click of a mouse, saving you time. Based on more than 50 years of experience in inventory management, the SMART System is a cost-effective and user-friendly solution that can manage your entire storeroom, whether you carry 50 or 50,000 items in stock.

Work SMART

Convenient. Efficient. Easy to use. That's the value of the SMART System. It's the one tool you need to take the work out of inventory management, allowing you to focus on other important areas of your business.

With the SMART system, you have complete control over what is ordered, when it's ordered and where it's ordered from.

Choose SMART

The decision to implement the SMART System is more than smart. It's a decision that shows you value an efficient, effective, organized workplace. Specifically, the SMART System allows you to:

- Decrease stock-outs
- Decrease NDA shipments
- Increase uptime
- Search database for storeroom part location
- Identify and eliminate duplications
- Generate inventory reports
- Analyze inventory automatically
- Track MRO cost per machine

The screenshot shows the SMART System web interface for ERIE BEARINGS CO. The interface includes a navigation menu with options like 'Parts Admin', 'Usage', 'Receipts', 'Replenishment', 'Cycle Count', 'Reports', and 'Search'. A table displays a list of parts with columns for Customer P/N, Supplier P/N, Balance, Min, Max, In P.O., Bin Location, and Price. A 'Part Details' sidebar on the right provides information for a selected part, including Supplier P/N, Customer P/N, UPC, Manufacturer, Supplier, Bin Location, Min, Max, Balance, Price, On PO, and Description. The bottom of the interface has buttons for 'Edit', 'Delete', and 'Print UPC'.
